

# Almacon Sustainable Development Goals (SDG'S)

Recognising the importance of the United Nations' seventeen Sustainable Development Goals (SDGs), Almacon has committed to integrating four of these goals into its vision, mission and operations. To strengthen our position in the market and create a positive impact, these goals will become increasingly visible on our website, within our premises, in our quotations and in our operational processes.

## SDG 4

---

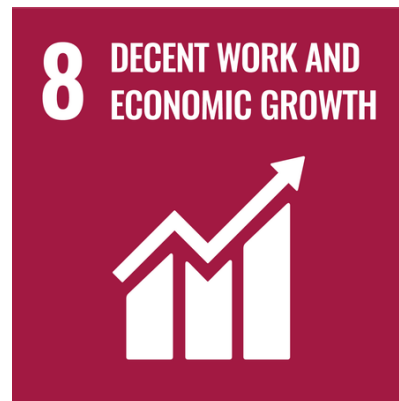

### DESCRIPTION

---

Adequate education is important for people in all age groups and at all stages of life, from pre-school education to 'lifelong learning'. Education ensures that workers have skills to function in a knowledge-intensive environment.

## SDG 8

---

### DESCRIPTION

---

Economic growth is sustainable only when capital, labour and resources are used responsibly and when profits and incomes are distributed fairly between citizens and businesses.

## SDG 9

---

### DESCRIPTION

---

SDG 9 aims to improve mobility and infrastructure, and reduce its drawbacks - such as lost time due to traffic jams, traffic insecurity and pressure on the environment. It also requires businesses to innovate and become more sustainable.

## SDG 17

---

### DESCRIPTION

---

International cooperation is needed to strengthen capacity and resources to implement the sustainable development agenda. Achieving the goals requires coherent policies, a cooperative environment and forging new global partnerships.
